

Narrows Marina Development

Client: NGP Development

Year: 2006 - 2008

SERVICES PROVIDED

CCTA was retained to prepare a preliminary Stormwater Management report in support of a draft plan of subdivision for a development in the Township of Severn, as well as preliminary and final design for vehicular access to Pilkington Island. CCTA prepared preliminary options and cost estimates for construction to NGP for review. A prefabricated steel truss superstructure on concrete abutments was determined to be the most cost effective solution. CCTA designed the concrete abutments and coordinated with Algonquin Bridge for the design of the superstructure. CCTA also provided construction administration and inspection services.
