

St. Andrews Presbyterian Church

Client: St. Andrews Presbyterian Church, Barrie

Year: 2008

SERVICES PROVIDED

CCTA was retained to perform a structural review to determine the impacts of future works planned as part of the long term renovation objectives of the church board of directors and parishioners.

The structural review included analysis for roofing upgrades, installation of barrier free components and overall conditions of the existing structure components. The report also provided commentary on the potential risks of upgrading the roofing assemblies only in a turn of the century building which does not have modern wall assemblies.
