

St. Andrew's College - Upper Playing Fields

Client: St. Andrew's College

Year: 2010 - 2013

SERVICES PROVIDED

CCTA provided civil engineering services for St. Andrew's College, Canada's largest all-boys boarding school in Aurora to help redevelop their athletic fields. An overall stormwater management strategy was developed which incorporated a series of innovative best management practices including bio-swales, recharge areas and a SWM pond facility all to improve drainage conditions on-site, and thereby enable the construction of a new artificial running track/soccer pitch, baseball field and two basketball courts. The project also included an improved road network and parking area for 150 vehicles. Approvals were secured from the Lake Simcoe Region Conservation Authority and Town of Aurora, and construction was completed in 2013.
